

Project Retrospective

Date: 11/11/2021

So far, we have managed to finish most of the documentation. Progress was a bit slow at first, but as we started individually working on tasks, things sped up pretty quickly. It also took some time for members of the group to get a grasp of the project. But like before, working through the documentation and diagrams helped get everyone up to speed. There was also an issue early on where a member left the group, we have since addressed it and are keeping it in mind as we move forward with the project.

Moving forward, we'll be more mindful that everyone's opinions and ideas are being thoroughly considered. We also plan to start assigning individual tasks to members so we can get started on the technical aspects of the project. And hopefully, as we get a better grasp of the big picture for this project, progress will continue to speed up as it has been since we started.
